

1.
 - a. The style guide for computer science is IEEE.
 - b. You can google the IEEE style guide or access it via their website.
 - c. It can be accessed.
2.
 - a. Linux Journal, IBM Journal of Research and Development, IEEE Systems Journal
 - b. They are reputable and offer a variety of articles of various subjects pertaining to the field they are working within. Also, one is dedicated to the advancement of the most widely used operating system in the world, the other is hosted by the world's former pioneer in personal computing, and the other is maintained by a well-known organization.
 - c. For the IEEE systems journal, you may find it here:
<https://ieeesystemsjournal.org/author-instructions/>
For the Linux Journal:
<https://www.linuxjournal.com/author/authguide>
For the IBM Journal of Research and Development:
<https://ieeexplore.ieee.org/document/5390985>
 - d. For the IEEE systems journal:
 - i. In terms of scope, the journal is looking for "papers considering systems in which several independent entities are interacting and cooperating"
 - ii. In terms of the criteria process, the article is verified with respect to the scope of the journal, completeness is checked, the article is assigned to 3 different reviewers, and the journal is revised based on recommendations
 - iii. In terms of submission, it must be in English, have an abstract, at least 5 keywords, double column, font 10 Times Roman, references at the end, figures must be sharp.
 - iv. Between \$1000 and \$2000 in open access fees
 - e. For the IBM Journal of Research and Development:
 - i. This information is not available, not even via csulb.libguides.com, it might be an internal publication for IBM researchers and employees only
 - ii. This information is not available, not even via csulb.libguides.com, it might be an internal publication for IBM researchers and employees only
 - iii. This information is not available, not even via csulb.libguides.com, it might be an internal publication for IBM researchers and employees only
 - iv. This information is not available, not even via csulb.libguides.com, it might be an internal publication for IBM researchers and employees only
 - f. For the Linux Journal:
 - i. The scope is "to learn how to do things on Linux readers couldn't do before. And, since Linux supports everything from watches to data centers and rockets in space, the range of possibilities rounds to infinite".
 - ii. The criteria process goes like this: letters sent as email, in the body of a plain-text message, what you plan to accomplish and by when. If Linux likes the idea, a deadline is sent back to you with an assignment letter, and after it is submitted, they let you know as soon as possible if it was accepted.

Matthew Zaldana

Computer Science

- iii. In terms of submission, must be plain ASCII text in the body of an email or attachment, references in square brackets, blank line between paragraphs, no indentation, images must only be either PNGs or JPEGs with a caption between 500 – 3500 words.
- iv. No information is given on fees. Only to contact Linux once article is sent.
